TECHNICAL SKILLS:

- Machine Learning
- Scikit-Learn,
- TensorFlow, PyTorch,
- Numpy, Pandas,
- Matplotlib
- Data Analysis
- Git, Github, CI/CD
- React, Node.js, Next.js
- Python, Javascript
- Firebase
- Jupyter Notebook
- SQL
- REST APIs
- Adobe Photoshop, Figma
- Flutter

SUMMARY:

Technical Operations professional and Full Stack Developer with 5+ years of total professional experience across engineering operations, administration, and software systems. Currently transitioning into **AI/ML Engineering and Data Science** through ongoing MCA studies, hands-on AI/ML specialization, and practical development of computer vision based inspection tools and various full-stack web applications.

EDUCATION:

- **Master of Computer Applications (MCA)** | (Ongoing)
Yenepoya University, India
- **BSc. in Computer Science** | (2017 – 2020)
College of Applied Sciences, IHRD - University of Calicut

ADDITIONAL TRAININGS & CERTIFICATIONS:

- AI–Machine Learning Developer** – ASAP Kerala, 2026 (Ongoing)
- Participated in Cognizant's Pre-Onboarding Training on **Selenium web testing using java**.
- Certification course in **MERN stack**
- Certificate course in **Flutter**
- AWS Cloud** Essentials course
- Certification course in **Next.js**
- Linux Command Line & Shell Scripting**
- Data Science using R**

PROJECT HIGHLIGHTS:

- ❖ **Weld Defect Detection System – (Visual Inspection Assistant)** : An industry-applicable computer vision system designed to identify critical weld defects.

Tech Stack: Computer Vision | OpenCV | YoloV8 | TensorFlow/PyTorch | Scikit-image | NumPy
Pandas | Matplotlib | React.js | AWS Deployment | Git for version control

Description: An end-to-end internal system to identify material weld defects in standard and X-ray images, designed to assist inspection engineers by reducing manual review effort in Non-Destructive Testing (NDT) and improving workflow efficiency. This project involves building a React front end, and a YoloV8 vision model. Designed the end-to-end technical workflow, from data preprocessing and image augmentation to model inference and frontend API integration.

Ente Kottakkal Project: Community Information and Services Platform

Tech Stack: Next.js | Node | Flutter | Android Kotlin | AWS Deployment | Git for version control
Firebase | CI/CD with Github Actions & Jenkins | Tested with Selenium & Jest

Description: A community-focused open-source multi-lingual platform developed for the people of "Kottakkal" village. Offers a large local database of useful information such as shops & workers contact details, various govt. & non-govt. organizations' contact, local bus timings, a complete blood bank database, and much more.

Modules:

1. Ente Kottakkal - The Main App: The main part of the app released to the end user. Realized as a Next.js web app contained inside an Android webview and utilizes a Firebase Realtime database.

[Live App on Google Playstore ↗](#)

2. EK Admin - The Admin Module: Made in Flutter. Used to manage and manipulate the data of the same Firebase database, with multiple levels of Admin privilege and a dashboard.

WORK EXPERIENCES:

❖ **Position:** Technical Operations Associate (Inspection Coordination & Systems Support)

Company: Adhuni Engineering Services, India

Duration: August 2021 - Present

➤ **Responsibilities**

- Actively conceptualizing an automated tool for **weld defect detection using Computer Vision** to analyze digital and X-ray images of material welds. This project helps inspection engineers improve their VT activities efficiency at inspection sites by saving manual review time.
- Developed and maintained multiple web applications and internal tools utilizing the MERN/Next.js stack and built RESTful APIs for seamless data exchange.
- Successfully deployed and managed multiple applications on cloud platforms. Designed and maintained scalable CI/CD pipelines and managed multiple Git repositories to ensure version control and automated deployment.
- In a multifaceted role across 3 divisions within Adhuni Group, held charge of two offices, overseeing daily operations including staff supervision, performance monitoring, financial expenditures, managing building administration and other related responsibilities.
- Offered additional administrative support to the subsidiary division Adhuni Institute of Certification & Training, along with sales & accounting support to Adhuni Gold Jewellers.
- Supervised and guided a team of Coordinators, Telecallers, Administration & Support staff.
- Participated in the Hiring Process as a member of the interview panel, primarily conducting technical stages of interviews; and mentored a team of up to 10 members including coordinators and support staff.

CREATIVE & PERSONAL VENTURES:

- ❖ Authored and self-published several fiction works including: In the Shadow's Wake, Eir Ad, The Valiant King, Vanaganam Republic, My Daughter's Name, In the Ancient Silence, In the Timeless Sands.
- ❖ Passionate hardware "tinkerer" and DIY electronics enthusiast with hobby-level experience in Arduino-based micro-electronics, legacy hardware modification, and Linux distro-hopping.
